

Murdoch Webster

We understand the
value of Human IT.

Murdoch Webster is a diverse team of experienced ICT professionals who provide technology services to help protect, transform, and evolve your business.

We work alongside our customers to identify and recognise business challenges, then develop and deliver practical, efficient, and scalable ICT solutions tailored to industry needs.

Nimble, deep domain expertise, customer obsessed and value for money - that's Murdoch Webster.

Security

Our certified consultants have extensive experience and knowledge of the cybersecurity landscape. Using a consultative prevention-based approach, we have delivered next generation cybersecurity solutions for customers across healthcare, government, education, commercial and enterprise throughout Australia.

Our goal is to be your trusted cybersecurity partner of choice – long term. We are deeply invested with a select range of industry leading technology partners, giving you confidence we can truly deliver.

Zero Trust

Assisting organisations to develop and implement Zero Trust strategies that remove implicit trust and ensuring access, whether human or machine, is continuously validated at every stage of the digital transaction.

Cyber Awareness Training

Expanding your knowledge of cybersecurity threats your company could potentially face. This is our guide to how to respond when you encounter risks and vulnerability within your organisation.

Vulnerability Risk Management, Threat Detection and Response

Providing best of breed technologies that include identifying, evaluating, remediating, and reporting on vulnerabilities.

Offensive Security

Uncovering security gaps and vulnerabilities within your environment by proactively testing technology systems, people and processes using a range of methodologies.

Endpoint and Application Security

Providing corporate network protection against threats posed by remote devices and ransomware with next generation endpoint and application (server workload) security solutions.

Secure Access Service Edge (SASE)

Delivering consistent security to all remote networks and mobile users.

Next Generation Firewalls

Preventing attacks and managing network access whilst securing your applications, data and users.

“ At Murdoch Webster, the team has a deep understanding and knowledge of the customer’s challenges. The level of detail in execution was outstanding and tech support quality was impressive. If you’re looking for best of breed, you’ve come to the right place.”

— CIO, valued retail client

Infrastructure

Infrastructure and networking are crucial components of a successful business IT framework. Murdoch Webster will enable you to safely connect any device to any application on any platform.

Our comprehensive and considered services will provide trustworthy implementations with the appropriate technology solutions.

“

We work in partnership with leading solution providers to ensure businesses remain viable, sustainable, accessible and affordable. Strengthened networks, systems and services should be looked upon as an enabler to help guarantee the continuity and resilience of your most important business functions.”

— Murdoch Webster Consultant

Wireless

Harnessing our expertise as a leading provider of next generation wireless solutions that focus on fast, secure, and improved user experiences, including the use of artificial intelligence.

Advanced Networking

Providing a complete suite of solutions and capabilities for all enterprise networking and WAN needs. This includes SD-WAN and LAN, VPN connectivity and remote access.

Backup and Replication

Working with leading technology providers to provision backup and data management platforms for cloud, virtual, physical, and Kubernetes environments.

Data Centre Networking

Architecting, deploying, and managing high performance server, storage, computing, and security platforms. Including hybrid IT architecture, software defined networking for your secure, high performance data centre environment – the beating heart of your business.

Telecommunications

We are a proven independent provider of domestic and international carriage services

Micro-segmentation

Designing and deploying a network and security technique to breakdown data centres and cloud environments into segments, right down to the individual workload, to improve breach containment, reduce the network attack surface and deliver visibility to ease compliance.

Consulting

We have an in-depth knowledge of technology and its place at the heart of a modern business strategy. Ensuring that your technology aligns with your business objectives, at every level, is critical to your success.

Our industry leading consulting service does just this. We specialise in applying custom insights and knowledge, assisting you to be clear about your goals, making the right transformation and technology decisions, and managing your journey.

Security Consulting

- Compliance (PCI, ISO)
